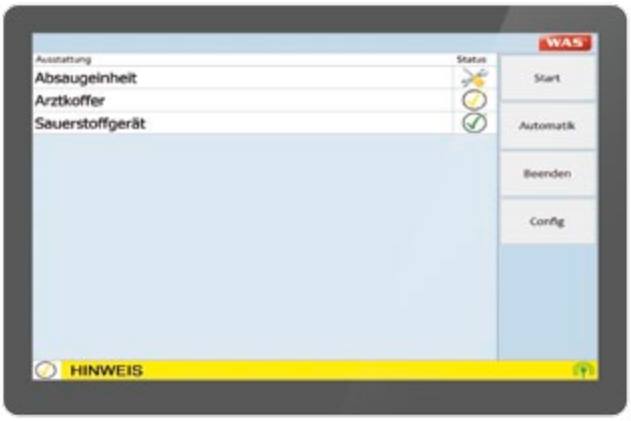
WAS NEWS IN 2016:
100 % CONTROL DURING RESCUE OPERATIONS.

Making vehicles special

WAS Smart Check mobile – the Mobile Equipment Monitor with RFID.

SHORT DESCRIPTION

Emergency services now have full control of their equipment even during rescue operations. The WAS Smart Check mobile delivers real-time information on misplaced or lost resources, thus preventing valuable medical equipment from going missing, even on operation site. The system also provides detailed information on expiry dates and maintenance intervals. WAS Smart Check mobile can be used in manual or automatic mode. In automatic mode, the system is activated upon arrival of the ambulance on site. The system runs a vehicle check according to adjustable cycles. Alternatively, the system check can be run manually by pressing the start button on the tablet monitor in the vehicle, after finishing the rescue operation. Further to an inventory management, the system indicates the latest use of the equipment in the vehicle. This information narrows the search for any missing equipment and saves time. The system also uses passive RFID technology and is compatible with the stationary version.



The clearly structured, easily readable tablet screen sorts out information and can even be used as a practical input tool for all relevant data.

The digital information contained in the labels is invisible, however these data media ensure the continuous documentation of key details on equipment and consumables.

The system can be fully integrated on board of the vehicle. It is easy-to-use and will therefore be used everyday to facilitate working.

WAS NEWS IN 2016:
100 % CONTROL DURING RESCUE OPERATIONS.

Making vehicles special

Nothing gets lost with Smart Check mobile. The data recordings show exactly the latest use of the equipment in the vehicle.

Complete: All medical devices and the most important consumables can be equipped with RFID chips. The equipment is then checked regarding integrity, expiry date and maintenance requirements.

With Smart Check mobile, any information on the equipment in the vehicle can be seen at any time during the rescue operations.

LABELS WITH RFID CHIPS
transmit all relevant information in real time.

THE RFID READ-OUT STATION
reads out all RFID chips in the environment.

THE TABLET MONITOR
displays the results of the equipment check.
